August 21, 1989

GPO to Produce Improved Cataloging Tapes

At the June 1989 meeting of the American Library Association in Dallas, extensive discussions were held on the *Monthly Catalog* tapes. The discussions, jointly sponsored by GODORT and the Depository Library Council, concentrated on the possibility of GPO producing an improved version of its machine-readable cataloging data, to be called the **GPO Cataloging Tapes**. Discussion participants included tape users, vendors, members of the Depository Library Council, a Library of Congress representative, and numerous depository librarians. A consensus developed in this and subsequent meetings which strongly supported the features of the proposed new GPO Cataloging Tape.

The Government Documents Round Table endorsed the GPO Cataloging Tape concept in a formal resolution. It was also orally endorsed by several current and former members of the Depository Library Council, as well as by several vendor representatives.

For the tape user community, there are four key advantages of the new tape product. The new GPO Cataloging Tape will be available for more timely release; the objectionable "availability" records for serials and multipart monographs will be eliminated; collective records for these materials will be provided; and all corrections or upgrades made by GPO on OCLC to earlier records will be included. Each of these features addresses a long-standing problem with the tape product. A more detailed explanation of the basic differences between the new GPO Cataloging Tapes and the current *Monthly Catalog* Tapes follows on page 3.

GPO will be proceeding with the programming changes required to produce this new version of the tapes. Assuming that all goes well, LPS hopes to have a test tape ready for release to the Library of Congress by 1990. Based on the discussions that took place in Dallas, there are compelling technical reasons which indicate that LC should distribute the new tapes through the MARC Distribution Service. Most tape loaders and vendors would prefer that LC sell the tapes, because LC will convert the data to the widely-accepted USMARC format. If the tapes were sold by GPO they would be in OCLC/ MARC format, a factor which may have in part accounted for the very low acceptance of GPO's version of the current tape product.

GPO Stops Sales of Monthly Catalog Tapes

GPO will discontinue sales of the current Monthly Catalog Tapes following the December, 1989 issue. This decision is being announced now so that customers who still want this information can shift their subscription to the Library of Congress. Given that GPO now has but one customer there is insufficient economic justification to continue these tapes as a sales product. No new subscriptions will be initiated, and any inquiries concerning sales should be directed to LC's Cataloging Distribution Service (CDS). The telephone number for CDS is (202) 707-6120. GPO will continue to transfer the Monthly Catalog Tapes in the current format to LC until we are advised to terminate the arrangement. This will allow LC to serve any subscribers who wish to continue purchasing the old format.

SuDocs Class for *Coal Map of North America*

Because of some confusion arising over the correct SuDocs classification for the *Coal Map of North America*, the following information was obtained from Charles Bennet of the U.S. Geological Survey (USGS).

The *Coal Map of North America*, distributed by the USGS on map depository shipping list #89-35, is a special map distributed as related material to the Coal investigations map series (SuDocs I 19.85:C-(nos.), Item 619-G-3). While neither the map nor the text carry a series number for classification purposes, the number was supplied on the shipping list. The three parts of the map are classed as follows:

- I 19.85:IA-21/north (for the north half);
- I 19.85:IA-21/south (for the south half); and
- I 19.85:IA-21/text (for the accompanying text).

"IA" is the USGS designation for separately produced special maps.

Monthly Catalog (MOCAT) Tape *(current format)*

- by-product of MoCat production process
- contains only OCLC "Produce" transactions
- contains "availability records" for serials and multipart items
- has no collective records
- includes only corrections made during the MoCat editorial cycle
- cannot be released until generation of MoCat print tape

GPO Cataloging Tape *(proposed new format)*

- contains no "availability records"
- contains collective records for serials and multipart items
- not linked to MoCat production process
- can be released to users earlier
- contains no MoCat ID numbers
- contains all corrections entered into OCLC by GPO, but corrections will appear in subsequent tapes

Government Documents Organizations List Being Compiled Be Included!

[The following is being printed at the request of the Liaison to GODORT Affiliates -- Ed.]

The Liaison to GODORT Affiliates is compiling a comprehensive listing of **ALL** government documents organizations. A partial list was compiled prior to the ALA convention in Dallas. There are still numerous gaps that need to be filled. The completed list will be published in an upcoming issue of *DttP*. Updates and changes will be made on a continuing basis.

Please submit the following information for any documents-related organizations (for international, federal, state and local documents), including those belonging to state library associations (roundtables, interest groups, forums, etc.), independent organizations on the regional/state/local/metropolitan level, and state depository library councils:

- 1) Official name of the organization;
- 2) Name of parent organization (if any);
- 3) Names of all current officers, their complete addresses, phone/fax/E mail numbers, and dates of their terms of office;
- 4) Name of newsletter (if any), including newsletters published by regional depositories and name of the editor(s), their complete addresses, phone/fax/E mail numbers, and dates of their terms of office;

Having an up-to-date list will be beneficial to organizations planning meetings, exchanging ideas and information, and individuals who may be changing jobs. However, once the list is compiled, it will be everyone's responsibility in keeping it as current as possible. Thank you for your prompt cooperation.

Please submit this information to:

Depository Helper Program Available to Libraries

The Montgomery County Library in Maryland has been using a database program called Depository Helper and is willing to make it available to other depository libraries for a nominal fee. Depository Helper has been designed expressly for the use of depositories.

The main features of the program are:

- Ease and speed of entry for new documents
- File cards printed out in SuDoc number order
- No need for sorting before filing
- Search the database for documents by key words
- Print out search results with full reference information
- Storage capacity is limited only by hard disk capacity
- Search speed is primarily a function of the computer speed.

Background

Many librarians are unfamiliar with the depository collection and the vast amount of valuable information available from the federal government.

When the University of California at Riverside Depository Library announced that it had developed a database that then held about 8000 entries, it was apparent that there was a starting place for an information retrieval system. At about the same time a new, advanced programmable database named "Paradox" was released. Supporters of the Montgomery County Depository Library of Maryland put these events together to formulate a program for the use of the library.

Over a period of about two years the program has evolved into a useful tool which can provide the needed information and save a substantial amount of labor in data entry operations. The database now contains over 10,000 entries and is growing daily. The entries are a mixture of the UC-Riverside data and the Montgomery County receipts. You will get the complete database, but the additions you require will be your responsibility. Documents which you do not have are included so that the patron will

know that the document exists, but must go elsewhere for it.

Program Description

The program was designed with two major objectives. The first objective was to use the unique capabilities of the computer to eliminate repeated operations such as retyping information which is common to each Item number. As soon as the Item number is entered all information common to that Item number is immediately displayed on the screen. The only further typing required is the title, SuDoc number, and special notes which may be desired. This feature alone cuts the typing labor in half. When the cards are printed they are sorted by SuDoc number first. Thus, the subsequent filing labor is saved with the cards in proper order. This results in an average of a little over a minute per card to enter the information, sort, and print a typical shipping list.

The second objective was to provide a simple method for librarians to easily find documentation citations and have a printed record to assist them and the patron. In this case, a search for "Key Words" in the title is used. After the search is completed it can be reviewed with the patron on the screen. If further definition is desired, the search can be redone with new "Key Words." The results of the searches, complete citations, can be printed for easy reference. There are footnotes on the printout explaining all the abbreviations and codes used.

We will provide, for a reasonable fee, services to update the basic system periodically; to obtain the basic information and reorganize it into the proper format for the program. All that is required is your updated selected choices from the *List of Classes*. From this list we will prepare your Master Selection List. This Master Selection List for your library is the key element for simplifying the data entry process.

Further information on this program can be obtained from **Terry M. Prudden, 13005 Wilton Oaks Drive, Silver Spring, MD 20906.**

Multitudes of Maps Available to Depositories

Is there a list of maps and atlases in the Depository Library Program which is easier to use than the *List of Classes*? Just such a list exists in Section 7 of the *Federal Depository Library Manual*. LPS has recently revised and updated Section 7 with additions and corrections. The revision will be shipped as Transmittal #2 to all depositories in late summer. In the meantime, the list is provided on the following pages as a "sneak preview" for librarians who may wish to review their map item selections.

Maps may be mailed to either the "depository of record" or to an alternate address. An alternate mailing address can be set up for U. S. Geological Survey and Defense Mapping Agency products because these agencies mail the maps directly to the map library. For all other maps, such as National Ocean Service and Forest Service, LPS distributes them only to the "depository of record". The "depository of record" then has the option to house the maps and charts in the documents collection or in the map library.

A great breadth of maps is available through the Depository Library Program. LPS would like all map and depository librarians to be aware of how to obtain them. Annually, during May and June, all depositories may revise their item selections which become effective on October 1 of each year. While the "window of opportunity" for additions has passed for the 1989 update, map librarians are encouraged to review the attached list, an extract from the new Section 7 in the *Federal Depository Library Manual*, in preparation for the 1990 Item Selection Update cycle.

A depository library is responsible for informing the map library on campus or other selective housing site about the rules and regulations governing the Depository Library Program as well as the availability of a multitude of maps. Each site should have a copy of the *Instructions to Depository Libraries* and the *Federal Depository Library Manual*. In order to obtain one extra copy of these materials, please write to:

Robert J. Samuelson

Wonders of the 'Statistical Abstract'

Did you know that horse racing outdraws every other major professional sport? In 1987, racing attendance totaled 70.1 million, a third more than major-league baseball (53.2 million) and more than four times pro football (15.2 million) and pro basketball (13.2 million). Is that so? Yes. And how do I know? The "Statistical Abstract" told me.

Calling all statistics fans. It's that time of year again—our Super Bowl and World Series combined. The Census Bureau has just published the 109th edition of the "Statistical Abstract of the United States." Its 1,450 tables cover everything from membership in the Boy Scouts (5.3 million in 1987) to the amount invested in individual retirement accounts (\$334 billion in 1987). You won't find every number you need to know. But you will find a lot—including many that you never imagined existed. For example: in 1987, 107 million Americans owned 841 million credit, charge and bank cards.

The "Statistical Abstract" is as instructive as it is delightful. It reminds you how complex our world is, because so much information on so many subjects is packed into one book. At its best, it's an almanac of trends. With some diligence, you can glimpse which way things are drifting, though not why. Browsing through the 1989 edition, I hit upon four trends that seemed especially important or interesting:

Blue-Collar Blues: We know that lower skills are more damaging than they used to be, but the statistics show by just how much. In 1988, workers 25 to 64 with one to three years of high school had an unemployment rate (9.6 percent) twice the national average. That's a sharp deterioration from the 1970s. Their income picture is bleaker. In 1987, these households had only 66 percent of average household income, down from 88 percent in 1970. Those with only a high-school degree have slipped too, though not as much. Between 1970 and 1987, their household income dropped from 104 to 90 percent of the average. What's happening?

Part of the drop is a statistical quirk. Older workers with less education have retired, pulling down the incomes of the entire group. The decline of unions is also hurting these workers. But that isn't the full story because unions have long represented only a minority of workers (17 percent in 1987). My hunch is that three other factors are to blame. First, a high school education has cheapened; it means less in skills and commands less in wages. Second, U.S. companies—facing stiffer competition from imports and deregulation—have squeezed labor costs more ruthlessly. And finally, low-skilled workers suffered most from the 1980s' high unemployment.

The Garbage Society: Yes, that's apparently what we're becoming. Since 1960, the amount of garbage ("municipal solid waste") has risen 80 percent to 158 million tons in 1986. That's 3.6 pounds per person per day, up from 2.7 pounds in 1960. About 36 percent of what we throw away is paper of one sort or another. That's followed by food wastes (9 percent), metals (9 percent), glass (8 percent) and plastics (7 percent).

We're improving a bit at recycling. In 1986, nearly 23 percent of discarded paper was recovered, up from 18 percent in 1960. More impressively, a quarter of aluminum waste is now recycled compared with almost nothing in the 1960s. Glass recovery is about 9 percent and plastics 1 percent. In a weird way, though, the garbage statistics confirm that we're shifting from a manufacturing to a service economy. Despite the rise of trash, it's been increasing at only about two-thirds the rate of the economy's growth since 1960.

R&D Revival: Everyone worries about whether we can stay competitive in world markets. One encouraging, though not widely noted, trend has been the recovery of research and development. For a decade—between 1966 and 1976—total R&D spending (adjusted for inflation) didn't rise at all. Since then, it's increased more than 60 percent. Corporations doing R&D now spend 3 percent of their own revenues, up from 2 percent in 1975. Between 1975 and 1987, the number of scientists and engineers employed in R&D jumped more than 50 percent to 801,000.

Because R&D leads to new products and greater efficiencies only slowly, these increases will help U.S. companies and living standards well into the 1990s. That's the good news. The bad news is that our major competitors, Japan and Germany, have also increased R&D spending. They spend about 2.8 percent of their gross national product on R&D, compared with our 2.6 percent in 1987. Moreover, most of their spending goes for commercial products. About a third of ours is defense-related.

The Coming Lawn Crisis?: Well, maybe. The spring rituals of mowing and gardening are upon us, but there are faint signs of sagging enthusiasm. The National Gardening Association does an annual survey, duly reported (table 390) in the "Statistical Abstract." Between 1983 and 1987, the proportion of households saying they engage in lawn care has dropped from 63 to 59 percent. Flower gardening slid from 47 to 43 percent, while vegetable gardening did a nose dive, from 42 to 33 percent.

Whimsical statistics are but one of the joys of the "Statistical Abstract." Dry as it seems, it can lead in a thousand different directions. It is the servant of the imagination, not the master. Of course, statistics are the starting point of inquiry and not the end. Are they accurate? Do they say what they seem to say? Anyone in search of more fundamental truths must probe beyond the numbers.

So be skeptical of all statistics. But enjoy them too, and what better place than the "Statistical Abstract." After all, where else can you so easily discover that in 1987 the average salary of a pro-basketball player was \$440,000, slightly more than that of major-league baseball players (\$412,000) and twice as much as that of pro football players (\$212,000)? Or that about 29 percent of all American homes have usable fireplaces?
